AI DLP CUSTOMER STORY

How Worldpac stops *sensitive data* from leaving

Anzenna's context-aware AI DLP checks every upload in the browser, AI tools included, and handles 99% of its own alerts, so Worldpac's security team only sees what needs a person.

99%
of alerts handled by Anzenna without a person stepping in

50%
faster investigations, from about 30 minutes to 15

<1 *min*

part numbers

AI DLP
in the browser

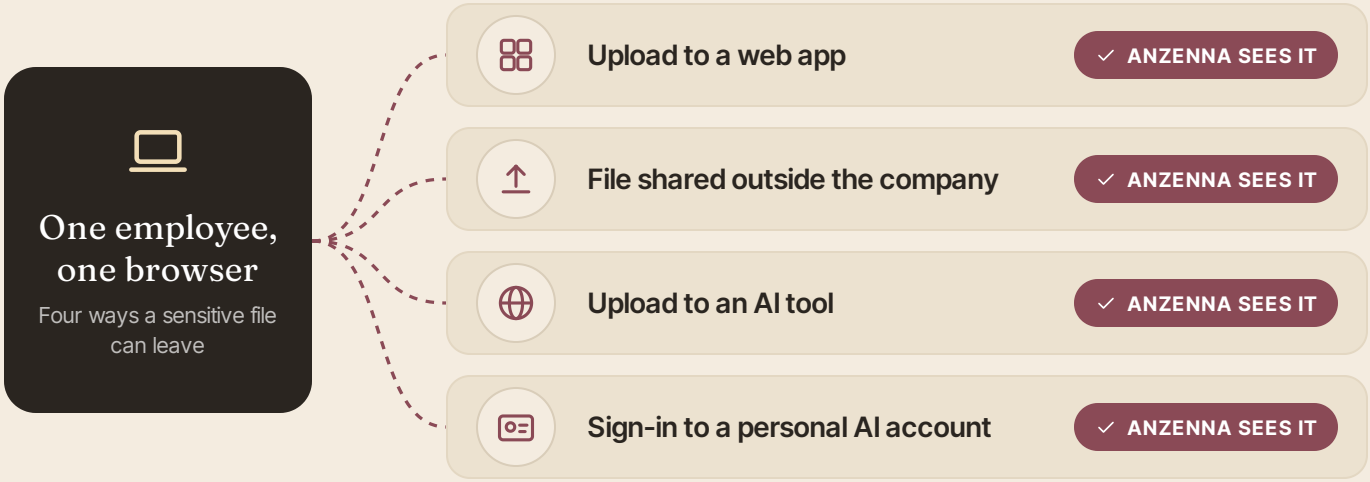

> *Anzenna gives us visibility into where sensitive data goes in the browser, including into AI websites, and that made it a very easy justification.*

JOSHOA KHURANA HEAD OF SECURITY, WORLDPAC

THE CHALLENGE

Where sensitive data *can leave*

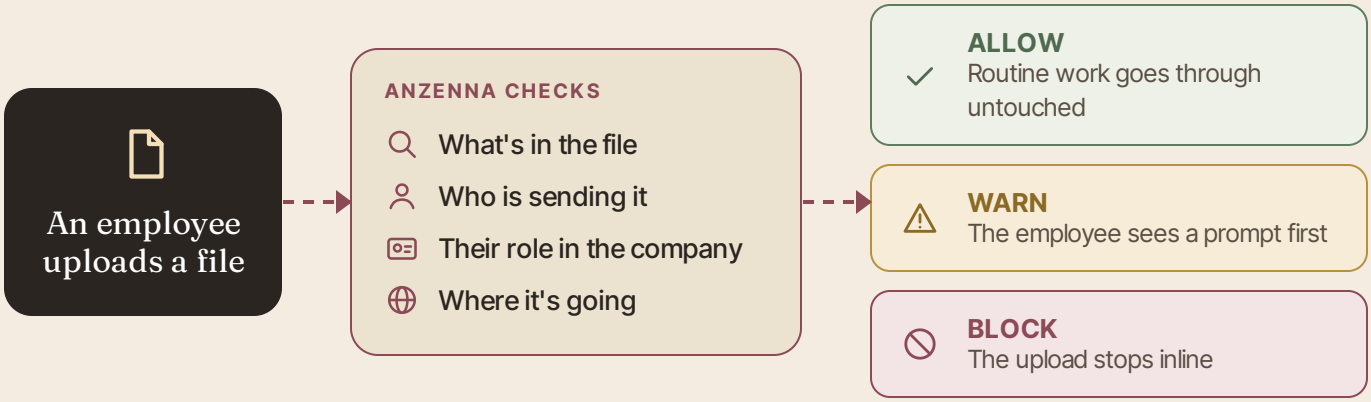

Worldpac ships more than 200,000 part numbers from over 320 locations, and close to 6,000 people keep it running across branches and warehouses. Much of that work happens in the browser, where a sensitive file is one upload away from leaving the company, and that activity creates more alerts than any security team can read one by one.

HOW ANZENNA SOLVED IT

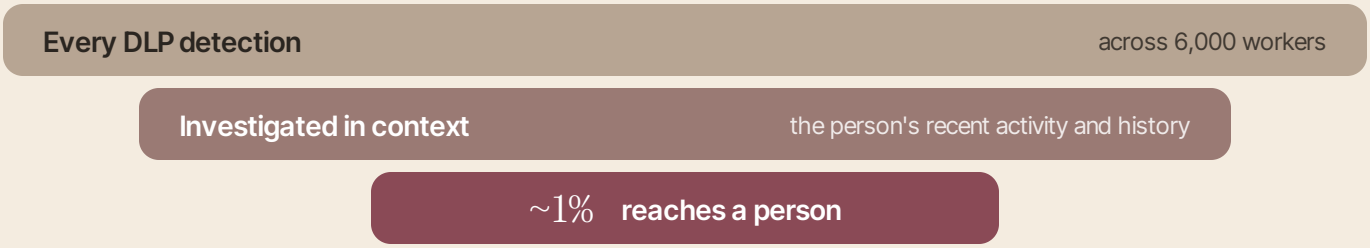

DLP that knows *the context*

Anzenna's browser extension checks every upload as it happens, whether it's headed to a web app or an AI tool. Its policies know the business and each person's role, so **most uploads pass with no friction and the extension steps in only when a file breaks policy.**

Alerts that investigate themselves

Anzenna investigates every alert in the context of the person behind it, including their recent activity and history, and flags only the 1% a human should look at.

The account behind *every AI tool*

AI is the newest way data leaves, and the same browser view shows which AI tools employees use, from chat tools to AI coding apps and MCP servers, and whether each login is personal or company-managed.

PERSONAL ACCOUNT

Outside company control, and what's typed in may be used for training.

COMPANY-MANAGED ACCOUNT

Covered by the company's contract and policies.

> *Now we have one central platform, and it has made life a lot easier. The Anzenna team is always available and there's constant back and forth, which plays a big role for us.*
